## Lab 2 - The ARM ISA

---

*Author:*

Drake Bridgewater  
Ryan Phillips

*Professor:*

Kevin McGRATH

April 18, 2014

**1 & 2)** Write a simple program to perform:  $Z = A + B + B - (D \times E)$ . The instructions you may use are ADD, SUB, and MUL. Assume that the data is in registers r0 to r4 (representing A to E) and the result is put in r5. Enter your program into the Keil simulator and run it. You can use move instruction to load data into registers. Do you get the expected answer?

lab2\_part1/lab2\_1.asm

```

    AREA lab2_1, CODE, READONLY
2    ENTRY

4 PART1
    MOV r0, #6      ;a
6    MOV r1, #3      ;b
    MOV r2, #4      ;c; MOV r3, #3      ;d
8    MOV r4, #2      ;e

10
    ADD r1,r1,r1      ;r1=r1+r1 || b=b+b
12    ADD r1,r1,r0      ;r1=r1+r0 || b=a+(b+b)

14    ;for muls you have to have diff destination register
    MULS r5,r3,r4      ;r5=r3+r4 || z=d*e
16    SUB r5,r1,r5      ;r5=r1-r3 || z=b-(d*e)

18 PART2
    ADR r6, A
20    ADR r7, C
    ADR r8, D
22    ADR r9, E
    ADR r10, F
24    ADR r11, Z
A    DCD 4
26 C    DCD -2
    D    DCD 3
28 E    DCD -12
    F    DCD 5
30 Z    DCD 0

32
    ADD r7,r7,r7      ; b=b+b
34    ADD r7,r7,r6      ; b=a+(b+b)

36    MULS r11,r8,r9      ; z=d*e
    SUB r11,r7,r11      ; z=b-(d*e)
38

40    END

```

While watching the register reflect each line of code I was able to view each commands effects on the bits. This allowed me to realize that the add operation and subtraction operations are performed exactly as expected, but once the multiplication command came into play I noticed that when the numbers are smaller minus larger the result is a negative.

3) Write a program that includes deliberate syntax errors. Enter it in the development system, assemble (build) it and then debug it.

lab2_part1/lab2_3_errors.asm		lab2_part1/lab2_3_fixed.asm	
	AREA lab2_3_errors, CODE, READONLY		AREA lab2_3_fixed, CODE, READONLY
2	ENTRY	2	ENTRY
4	ADR r0, A	4	ADR r0, A
	ADR r2, C		ADR r2, C
6	ADR r4, D	6	ADR r4, D
	ADR r6, E		ADR r6, E
8	ADR r8	8	ADR r8, F
	ADR r10, Z		ADR r10, Z
10	A DCD 4	10	A DCD 4
	C DCD		C DCD -2
12	D DCD 3	12	D DCD 3
	E DCD -12		E DCD -12
14	F DCD 5	14	F DCD 5
	Z DCD 0		Z DCD 0
16		16	
18	ADD r2,r2	18	ADD r2,r2,r2
	ADD r2,r2,r0		ADD r2,r2,r0
20		20	
	MULS r10,r6,r8		MULS r10,r6,r8
22	SUB r10,r2,r10	22	SUB r10,r2,r10
		24	END

assembling lab2\_3\_errors.asm...

lab2\_3\_errors.asm(6): error: A1163E: Unknown opcode r4, expecting opcode or Macro

lab2\_3\_errors.asm(8): error: A1106E: Missing comma

lab2\_3\_errors.asm(11): error: A1110E: Expected constant expression

lab2\_3\_errors.asm(24): warning: A1313W: Missing END directive at end of file

assembling lab2\_3\_fixed.asm...

".\lab2.axf" - 3 Error(s), 1 Warning(s).

Error on line 6: can be fixed by adding tabbing out the command out. The compiler thinks that ADR is a label and that r4 is the opcode; that is why it is saying unknown opcode r4. Error on line 8: can be fixed by adding comma but will still complain if you only add a comma. Therefore you will have to add an additional operand. Error on line 11: can be fixed by adding the expected expression, either numeric or PC-relative, as the Directive allocates one or more words of memory aligned on four-byte boundaries. Error on line 24: can be fixed by telling the compiler where the end of the program is or placing 'END' on the last line. Error on line 18: this error is not seen as an error but as a bug; the attempt is to add the two register but you must specify the Rd or destination, Rn or the first operand and operand2 or the second operand in order to sum two values.

## Part 2: Examination of compiler output

In the homework, you were asked to write an assembly routine that checks for palindromes in odd length strings. For this portion of the lab, please write a simple C program that does the same thing, use the web based compiler and compile your C code to ARM assembly (use arm-linux-gnueabi-g++-4.6 with option -O0). Compare this assembly with what you wrote. Modify the optimization level from 0 to one of the values in the set 1,2,3,s. What changes? Why do you think these changes were made?

For this lab, you will need to create a write-up discussing the differences you see in Part 2. Do you see any interesting features being used? Is the hand assembly you wrote significantly different than what the compiler produced? Which uses fewer instructions? In other words, provide an analysis of Part 2.

palindrome.c

```
/*
2  *   Author:   Drake Bridgewater and Ryan Phillips
   *   Created:  04/16/2014
4   *   Filename: palindrome.c
   *
6   *   Description:
   *
8   *   Checks an odd length string input to see if it is a palindrome.
   *
10  *   Input: second command line param is an odd length string
   *   Return: 1 if it's a palindrome, 0 if it isn't
12 */

14 #include <stdio.h>
   #include <math.h>
16 #include <string.h>

18 void noop_message(int argc, char *argv[]){
   printf("*****palindrome.c*****\n");
20  printf("****By Drake Bridgewater and Ryan Phillips****\n");
   printf("Usage: %s INPUT_STRING_HERE \n",argv[0]);
22  printf("Note: Only accepts odd length input strings \n");

24 }

26 int main(int argc, char *argv[]){

28  char *in_string;
   in_string = argv[1]; //
30  int in_length = strlen(in_string);

32  // should have just one additional arg, and it should be an odd length
   string
   if (argc == 1 || argc > 2 || ((in_length%2) != 1)) {
34  noop_message(argc, argv);
   } else {
```

```
36     int ret = 1;
37     int i;
38     for (i = 0; i < (in_length-1)/2; i++){
39         if (in_string[i] != in_string[in_length-i-1])
40             ret = 0;
41     }
42
43     //for testing
44     //printf("%s %d", in_string, in_length);
45     //printf("%d\n", ret);
46     return ret;
47 }
48
49 }
50 }
```
